1. LCA PROMOTION

« We must measure if we want to progress »

It's the main principle to implement
an holistic quality management.

FIRST OPUS :

The construction process
and the LCA procedure

SECOND OPUS :

What are the most significant indicators in the perspective of CSR.

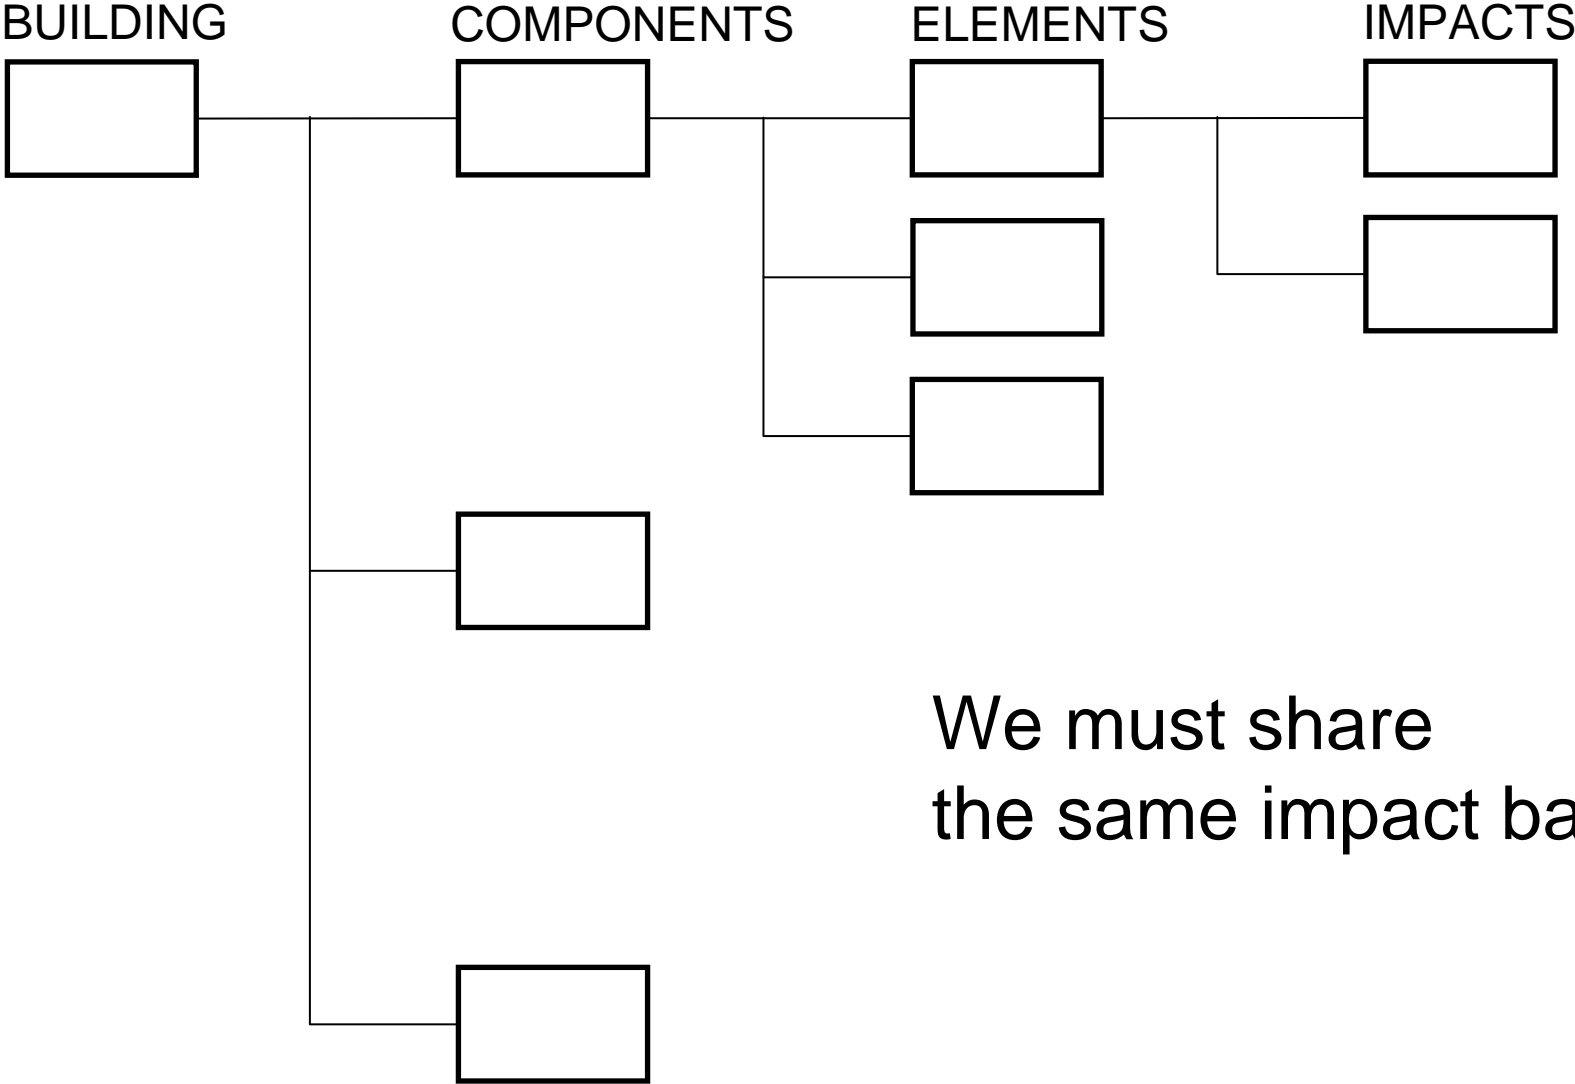

THIRD OPUS :

How to take advantage of LCA assessment at the neighbour level.

2. LCA IMPROVEMENT

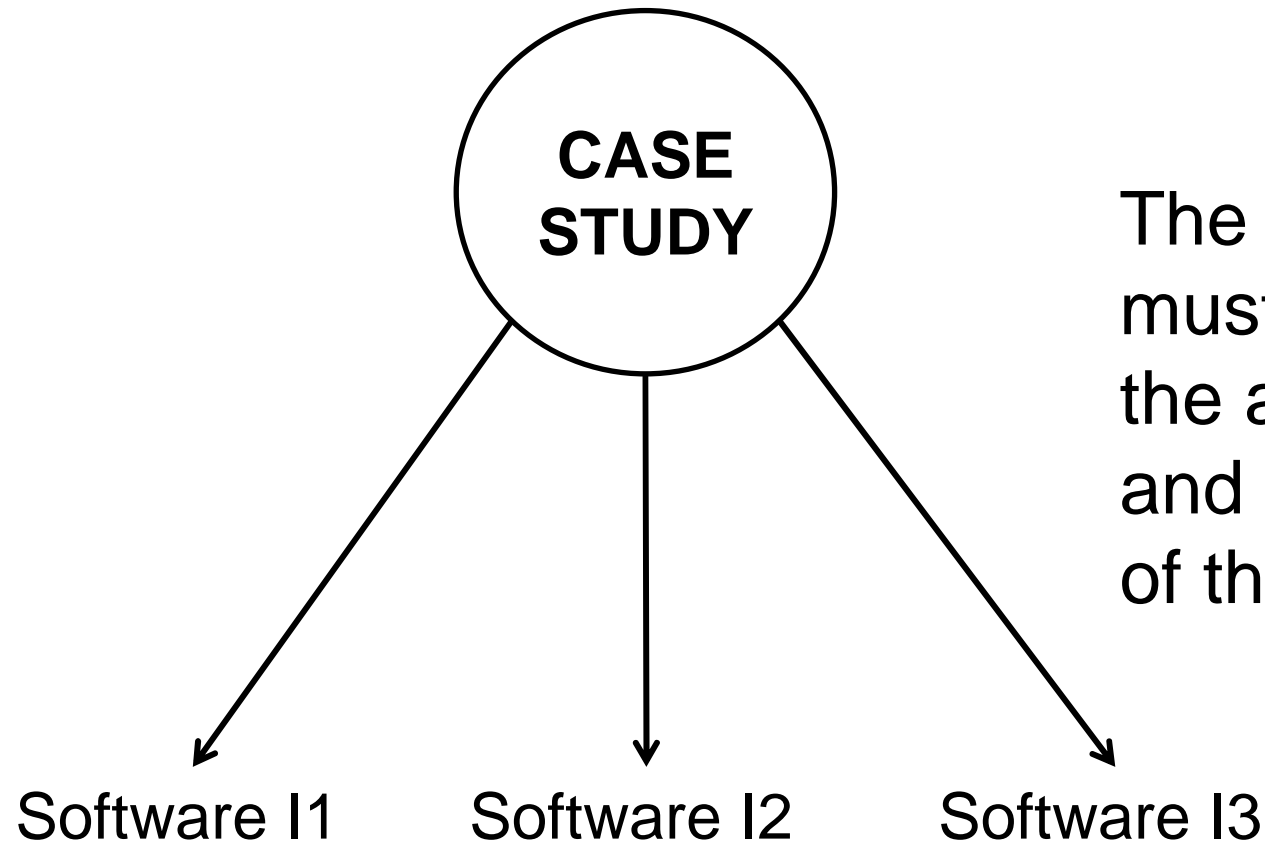

The LCA deployment needs three conditions
to be more efficient.

A. THE DATA BASE

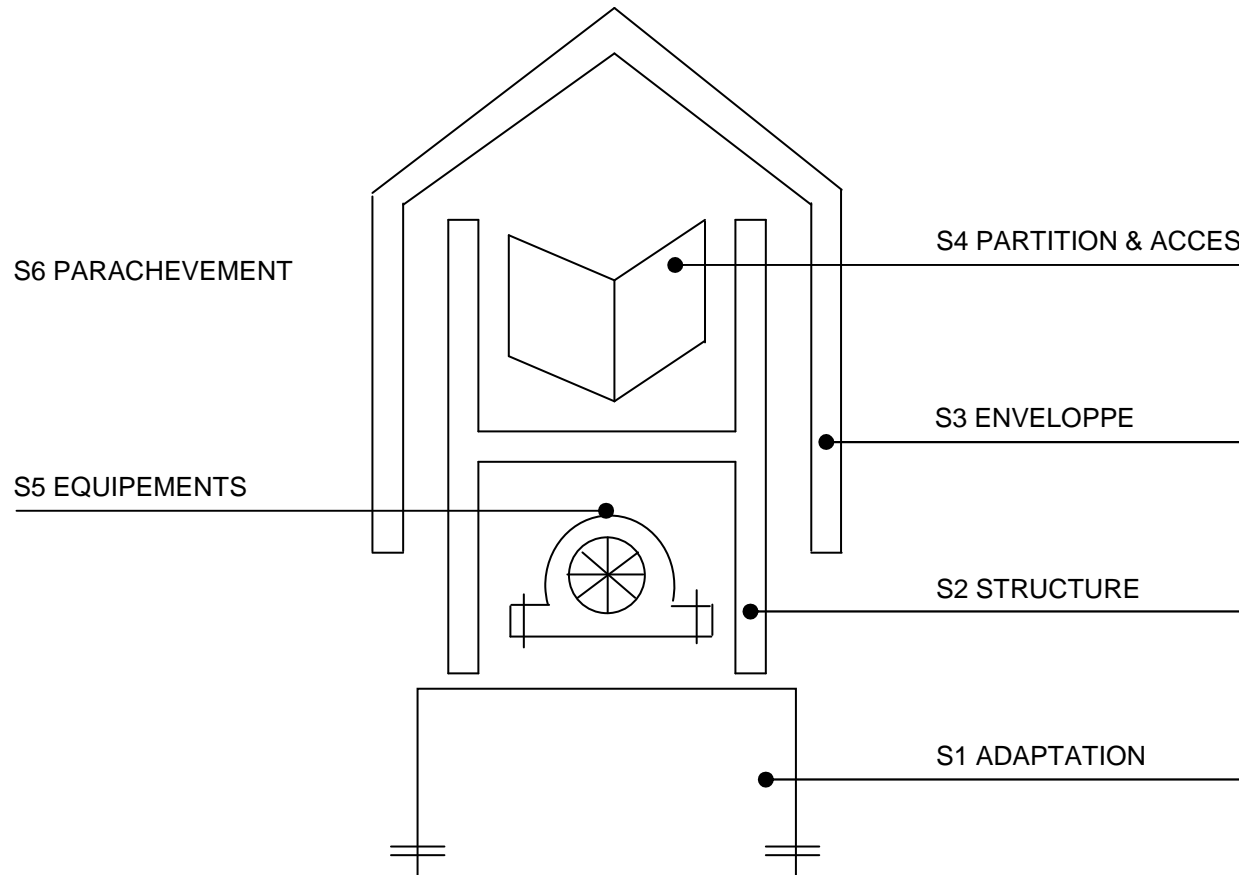

We must share
the same impact base.

B. THE COMPARATIVE EVALUATION OF THE SOFTWARE

The « end user » must know the advantage and the « lost » of the device he uses.

C. THE COMMON RULES FOR QUANTITY BILL

We must use the same rules to establish the quantity bill.

The LCA measurement is an European challenge to improve sustainable construction and contribute to a more efficient urban fabric.
